

OUTPUT

1) Linear Regression – Apartment Rent Prediction

Intercept = 1328.5

Coefficients

Area = 15.8

Rooms = 970

Location = 1985

Predicted Rent = 27152

2) Linear Classification – Spam Detection

OUTPUT

Spam Email

Result Analysis

- Dataset loaded.
- Logistic Regression model trained.
- Email classified.
- Prediction = Spam.

• 3) Naive Bayes – Flu Prediction

OUTPUT

Prediction = Yes

Result Analysis

- Dataset imported.
- Gaussian Naive Bayes trained.
- Symptoms entered:
 - Fever = Yes
 - Cough = Yes
 - Headache = Yes
- Prediction = Patient has Flu.
